

MY PORTFOLIO WEBSITE

[My story](#)

 [Resume](#)

[Skills](#)

[Projects](#)

[Contact](#)

Hello,

My name is
Marion

I'm a software engineer

localhost:5173/#myResume

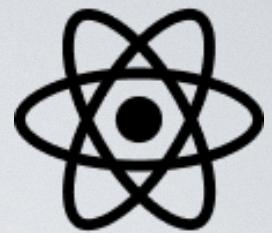

HERO PAGE

MY INSPIRATIONS

- Looked at various designs on [webflow.com](#).
- Also drew inspiration from AI. ([imagine.art](#))
- Explored different fonts on [Google Font](#).
- Everything I liked, I put on a Mood Board in [Figma](#).

TECHNOLOGIES

- I chose React to create my website.
- We learnt the framework during the course and I wanted to practice using it.

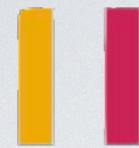

ANIMATED BACKGROUND

- I took the code from the Internet and tweaked it a bit.
- I changed the background colour, repositioned the items and added the logos which I downloaded on Simple Icons, Teeny Icons and Font Awesome.

GRADIENT BACKGROUND

- Generated it with this [page](#).
- I owe most of my CSS knowledge to [Josh Comeau](#) (and Aaron, of course!)

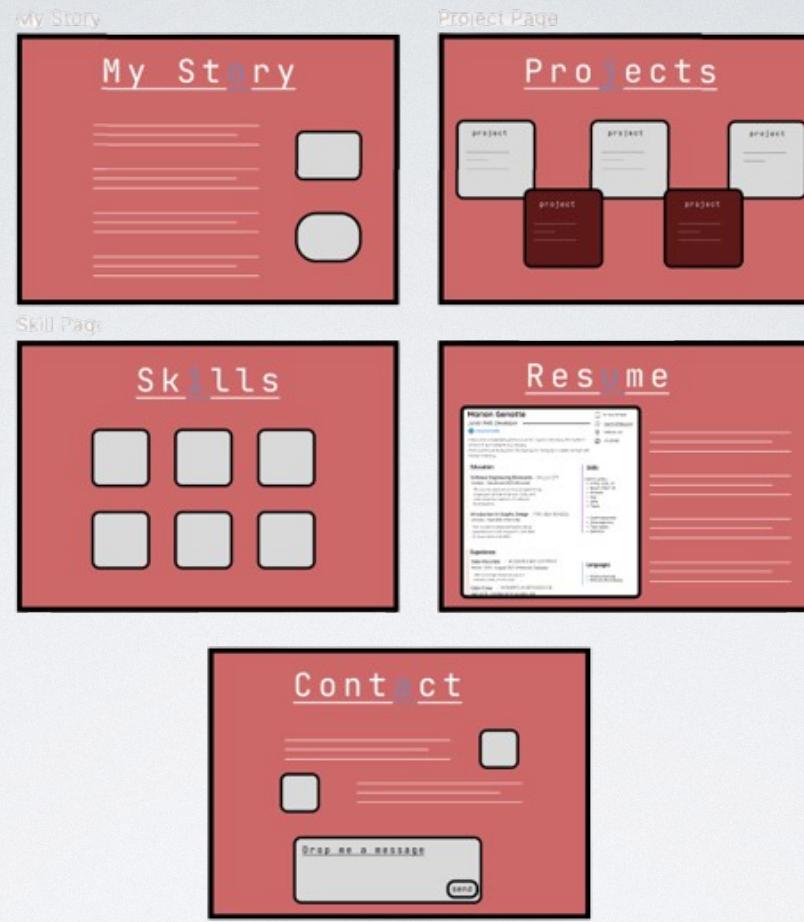

Josh ^ **Comeau**

ANIMATED ICON

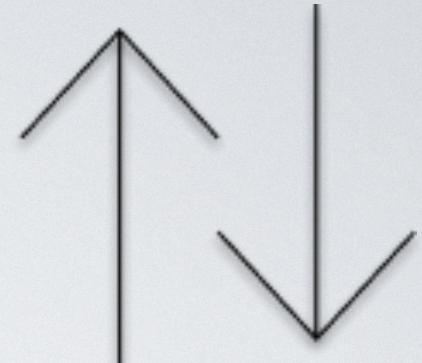

- Was able to implement this pseudo-3D icon thanks a library called [zDog](#).
- Event listener on the links that makes the icon appear on hover.

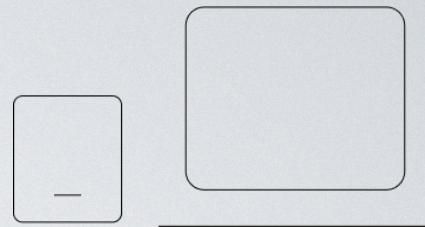

OVERALL DESIGN

FLOW

- I wanted something that flows naturally.
- A simple enough layout so the user can glide effortless through each page.
- But also interactive so it's not too boring to watch. (Use of hover, box-shadow and animations)

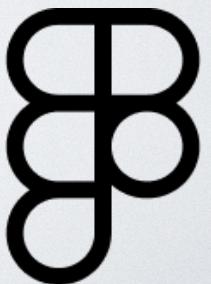

RESPONSIVENESS

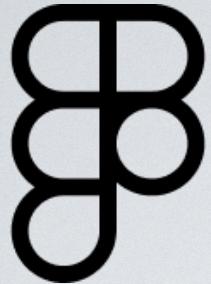

- My website works on mobile devices and desktop monitors.

FIGMA

- Again, Figma has been a big help for creating my design.
- I was able to see the bigger pictures and try out different things before starting coding.
- My Figma [here](#).

ARROW ICONS

- I made my arrows with Figma

- Scroll-up icon at the bottom right.

- Corner arrow in the icon section.

CONTENT & CV

- Wrote a quick summary of my journey into coding.
- Put an image of my CV and a downloadable version.

RAW CODE

- I really wanted to have 100% control over my code, and understand every line.
- I did use external code but it was nothing I could not understand.
- I didn't use CSS frameworks like Tailwind or Bootstrap.

FUTURE CODING

- Once I'm really confident with the design, I'll consider using other tools.

PROJECTS

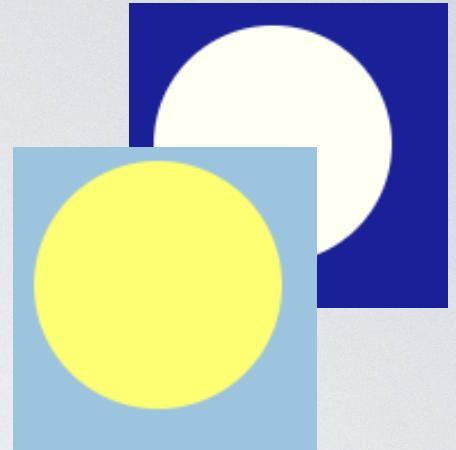

POKEDEX

- The project I am the most proud of is my Pokédex.
- I have been working on it prior to the Bootcamp, I couldn't figure out how to make it work.
- Now, that I have a better understanding of JavaScript, I was able to finish it.

CSS TRANSITIONS

- One of projects is a time-lapsed animation from day to night.

ONGOING PROJECTS

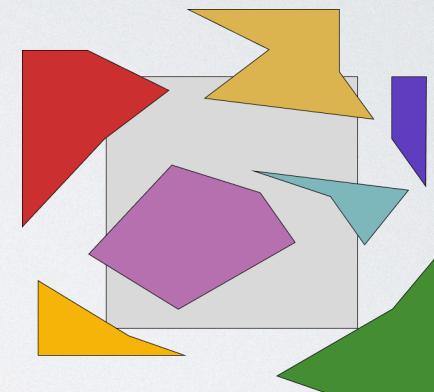

- Personality Test

- Recipe Blog

- More games

- Puzzle
